

ALUVALA EDIGA HARSHA VARDHAN GOUD

Kurnool, India | 7995756048 | [Gmail](#) | [LinkedIn](#) | [GitHub](#)

Highly motivated MCA student specializing in Artificial Intelligence, Machine Learning, and Data Analysis with hands-on experience in developing AI-powered applications, predictive models, and secure authentication systems. Proficient in Python, SQL, Machine Learning algorithms, data preprocessing, and data analysis tools for building intelligent and scalable solutions. Experienced in working on projects involving healthcare prediction models, biometric authentication systems, and AI-driven data analysis platforms. Strong analytical and problem-solving skills with the ability to extract meaningful insights from data, develop data-driven solutions, and continuously learn emerging technologies.

TECHNICAL SKILLS

- | | | | |
|----------|--------------------|-----------------|------------|
| • Python | • Machine Learning | • Data Analysis | • Pandas |
| • NumPy | • IoT | • Excel | • OpenCV |
| • C++ | • Flask | • Django | • MongoDB |
| • Git | • GitHub | • SQL | • Firebase |

WORK EXPERIENCE

Artificial Intelligence Intern | Corizo (Online), Bengaluru

12/2023 – 02/2024

- Developed machine learning models using Python for predictive analysis.
- Worked with data preprocessing, feature extraction, and model evaluation.
- Applied libraries such as Pandas, NumPy, and Scikit-learn for data analysis and model building.

Tools used: Python, Pandas, NumPy, Machine Learning Algorithms, Jupyter Notebook, OpenCV, Scikit-learn

Data Science Intern | Interncall (Offline), Kurnool

01/2024 – 04/2024

- Performed data analysis and visualization using Python and Excel.
- Processed datasets using Pandas and NumPy to extract meaningful insights.
- Implemented machine learning techniques for predictive analytics tasks.

Tools used: Python, Pandas, NumPy, Excel, Power BI, SQL, Jupyter Notebook

Associate Developer | [SRIIT Pvt Ltd](#) | Remote

04/2026 – Present

- Working on real-time software development projects in a remote collaborative environment.
- Collaborating with teams associated with Melbourne, Australia, gaining international exposure.
- Developing applications using Python and modern technologies.
- Applying AI and Machine Learning concepts in data-driven solutions.
- Contributing to system design, optimization, and performance improvement.
- Continuously learning and adapting to new tools and technologies.

Tools Used: Python, FastAPI, React.js, Docker, Git, AWS Cloud Services

PROJECTS

DataSci – AI Powered Data Analysis | WEB APPLICATION | [Link](#) | [Live](#)

- Developed an AI-powered data analysis platform that automates CSV data cleaning, visualization, machine learning predictions, and PDF report generation.
- Created dashboards and visualizations to present insights on infection growth patterns and country-wise comparisons.
- Tools used:** Python, Flask, Pandas, NumPy, Scikit-Learn, Plotly, Firebase, and Render Cloud.

COVID –19 GLBOAL – DATA ANALYSIS & DATA VISUALIZATION

- Analyzed global COVID-19 datasets to identify trends in confirmed, recovered, and death cases across multiple countries using exploratory data analysis.
- Created dashboards and visualizations to present insights on infection growth patterns and country-wise comparisons.
- Tools used:** Python, Pandas, NumPy, Jupyter Notebook, Excel

Cardiovascular Disease Prediction (Major Project)

- Developed a machine learning model to predict cardiovascular disease risk using healthcare datasets, achieving high prediction accuracy through data preprocessing and classification algorithms.
- Tools used:** Python, Pandas, NumPy, Jupyter Notebook, Scikit-learn

Spotify Songs' Genre Segmentation (Mini Project)

- Analyzed Spotify song datasets and applied machine learning techniques to segment songs into genres based on audio features and pattern analysis.
- Tools used:** Python, Pandas, NumPy, Machine Learning, Jupyter Notebook

QR & Voice Authentication Attendance System | AI & ML | [Link](#)

- Developed a secure attendance system using QR code scanning and AI-based voice verification to prevent proxy attendance, with real-time cloud storage and automated reporting.
- Tools Used:** Python, OpenCV, SpeechRecognition, Resemblyzer, Firebase Firestore.

QR ,OTP ,Voice Multi Authentication Smart Locking System | AI & ML | [Link](#)

- Developed a QR, OTP, and AI-based Voice Multi-Authentication Smart Lock System that enhances access security through multi-factor verification and real-time validation.
- **Tools Used:** Python, OpenCV, SpeechRecognition, Resemblyzer, Firebase Firestore, SMTP, VS Code.

Smart Lock System With TOTP Authentication | IoT | [Link](#)

- Developed a Smart Lock System with TOTP-based Two-Factor Authentication using C++ and OpenSSL, integrating PIN verification and time-based OTP compatible with Google Authenticator to enhance secure access control for smart lock and embedded security applications.
- **Tools used:** C++, OpenSSL, TOTP (RFC 6238), Google Authenticator, Linux/WSL, g++, Cryptographic Hashing (HMAC-SHA1)

AI Assistive System for the Blind| AI & ML | [Link](#)

- Developed an **AI-powered Assistive Front Alert System** that detects obstacles, gestures, facial expressions, and emergency sounds in real time, providing **voice alerts and directional guidance** to improve safety for visually impaired users.
- **Tools Used:** Python, YOLOv8 (Ultralytics), OpenCV, MediaPipe, NumPy, Pyttsx3 (Text-to-Speech), SoundDevice, Haar Cascade Classifier, VS Code Simulation.

Eye Detection Blink Module | AI & ML | [Link](#)

- Developed a **real-time eye blink detection system** for **liveness detection and user interaction**, using computer vision to monitor eye movements from a webcam.
- **Tools Used:** Python, OpenCV, Dlib, NumPy, Facial Landmark Detection (EAR Algorithm).

Real-Time Facial Emotion Detection System | AI & DL | [Link](#)

- Developed a real-time facial emotion detection system that captures webcam input, detects faces using MediaPipe, and analyzes facial expressions with DeepFace to display dominant emotions with confidence scores.
- **Tools used:** Python, OpenCV, MediaPipe, DeepFace, NumPy, Computer Vision.

AI-Enabled Occupancy and Temperature Adaptive Smart Ceiling Fan System for Energy Efficient Smart Homes| AI & IoT | [Link](#)

- Developed an AI-enabled smart ceiling fan system using computer vision to detect occupancy and automatically regulate fan speed based on temperature conditions.
- **Tools used:** Python, OpenCV, YOLOv8 (Ultralytics), Computer Vision

EDUCATION

Bachelor of Commerce in Computer Applications (BCOM)	12/2021 – 05/2024
St Joseph's Degree and PG College (KURNOOL)	
Master of Computer Applications (MCA)	09/2024 – 04/2026
Rajeev Gandhi Memorial College of Engineering and Technology (NANDYAL)	

ACHIEVEMENTS

- **NPTEL Certification** – Introduction to Internet of Things with 78% score.
- **NPTEL Certification** – Cloud Computing with 62% score.
- **Participated in Hackathon (21 Feb 2025)** and reached the final stage (Top 4 teams) with a Smart Attendance System using Face Detection using Face Embeddings, narrowly missing 3rd place by 3 marks.
- **State-level Carrom Player**, demonstrating competitive performance and strategic skills.
